Summary

This report aggregates 1 experiments spanning over the following subjects:

kubernetes

Experiment

Do we remain available in face of pod going down?

We expect Kubernetes to handle the situation gracefully when a pod goes down

Summary

Status	failed
Tagged	kubernetes
Executed From	small
Platform	Linux-6.6.2-101.fc38.x86_64-x86_64-with-glibc2.37
Started	Sun, 03 Dec 2023 20:03:55 GMT
Completed	Sun, 03 Dec 2023 20:04:06 GMT
Duration	11 seconds

Definition

The experiment was made of 1 actions, to vary conditions in your system, and 0 probes, to collect objective data from your system during the experiment.

Steady State Hypothesis The steady state hypothesis this experiment tried was “**Verifying service remains healthy**”.

Before Run The steady state was verified

Probe	Tolerance	Verified
all-our-microservices-should-be-healthy	True	True

After Run The steady state was not verified.

Probe	Tolerance	Verified
all-our-microservices-should-be-healthy	True	False

Method The experiment method defines the sequence of activities that help gathering evidence towards, or against, the hypothesis.

The following activities were conducted as part of the experimental’s method:

Type	Name
action	terminate-boardsService-pod

Result

The experiment was conducted on Sun, 03 Dec 2023 20:03:55 GMT and lasted roughly 11 seconds.

Action - terminate-boardsService-pod

Status	succeeded
Background	False
Started	Sun, 03 Dec 2023 20:03:55 GMT
Ended	Sun, 03 Dec 2023 20:03:55 GMT
Duration	0 seconds
Paused After	10s

The action provider that was executed:

Type	python
Module	chaosk8s.pod.actions
Function	terminate_pods
Arguments	{'label_selector': 'app=paymentservice', 'name_pattern': 'paymentservice-[0-9].*\$', 'rand': True}

Appendix

Action - terminate-boardsService-pod The *action* returned the following result:

```
['paymentservice-7b6fdd5657-vm9hf']
```
